III. HEALTH INFORMATION

I, undersigned, certify that the animal described above meets the following requirements:

- a) It comes from a country where the following diseases are compulsorily notifiable:
African Horse Sickness, Dourine, Glanders, Equine Encephalomyelitis (of all types including VEE),
Equine infectious anaemia, Vesicular stomatitis, rabies & anthrax
- b) On 31/08/2026. (date), date of loading, I examined the said animal and found it free from clinical signs of infectious or contagious disease.
- c) The said animal is not intended for slaughter under a national programme to control or eradicate a contagious or infectious disease
- d) (i) The said animal does not come from the territory or part of the territory ⁽¹⁾ of a Member State which is the subject of restrictions for reasons of African Horse Sickness; **AND**
(ii) The said animal is not vaccinated against African horse Sickness
- e) It does not come from the territory or in cases of official regionalization according to EEC Legislation from a part of the territory of a third country in which:
 - (i) Venezuelan equine encephalomyelitis has not occurred during the last two years
 - (ii) Dourine has not occurred during the last six months
 - (iii) Glanders has not occurred during the last six months
 - (iv) Vesicular stomatitis has not occurred during the last six months
 - (v) African horse sickness has not occurred during the last two years
 - (vi) In the case of an uncastrated male equine animal, Equine viral arteritis (EVA) has not been officially recorded during the last six months

OR

~~The animal was tested on a sample blood taken within 21 days of export on....., by a virus neutralization test for EVA with negative result at a dilution of 1 in 4~~

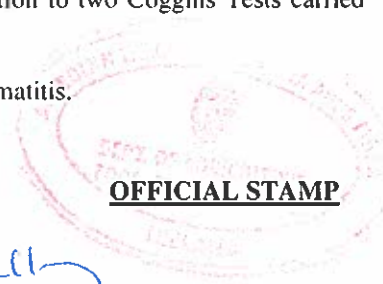

OR

~~The semen of the animal taken within 21 days of export on..... was tested by a virus isolation test for EVA with negative result~~
- f) The said animal has not come from a holding which was subject to prohibition for animal health reasons, nor in so far as can be determined had contact with equidae from a holding which was subject to prohibition for animal health reasons.
 - (i) During six months in the case of equidae suspected of having contracted Dourine, beginning on the date of the last actual or possible contact with a sick animal. However, in the case of a stallion, the prohibition should apply until the animal is castrated.
 - (ii) During six months in the case of Glanders or Equine Encephalomyelitis, beginning on the day on which the equidae suffering from the disease in question are slaughtered.
 - (iii) In the case of Infectious Anaemia, until the date on which, the infected animals having been slaughtered, the remaining animals have shown a negative reaction to two Coggins Tests carried out 3 months apart.
 - (iv) During six months from the last case in the case of Vesicular Stomatitis.
 - (v) During one month from the last case, in the case of Rabies.

(vi) During 15 days from the last case, in the case of Anthrax.

If all animals of species susceptible to the disease located on the holding have been slaughtered and the premises disinfected, the period of prohibition shall be 30 days, beginning on the day on which the animals were destroyed and the premises disinfected, except in the case of Anthrax, where the period of prohibition is 15 days.

- g) The said animal has been resident on premises under veterinary supervision for the 40 days immediately prior to export, and during that time has not been in contact with equidae suffering from any infectious or contagious disease
- h) The said animal has been resident in the European Union for at least 180 days immediately prior to export.
- i) On 18/08/2026 being within 30 days of export, blood samples were taken from the said animal and sent to Labor Dr. Bose GmbH and The Pirbright Institute where they were submitted to the following tests with negative results (5)
- i. A Complement Fixation Test for Dourine at a dilution of 1 in 10⁽⁴⁾⁽⁵⁾
 - ii. A Complement Fixation Test for Glanders at a dilution of 1 in 10⁽⁴⁾⁽⁵⁾
 - iii. A ELISA test for African Horse Sickness
- j) The said horse was tested for Equine Infectious Anemia, carried out on a blood sample taken on 18/08/2026 within 30 days of export and sent to Labor Dr. Bose GmbH where it was submitted to the agar gel immunodiffusion (Coggins) with a negative result⁽⁴⁾.
- k) During the 60 days immediately prior to export, but not within 14 days of export, the horse received:

Either (i) at least two primary vaccinations against Equine Influenza, given between 21 and 42 days apart⁽³⁾⁽⁵⁾⁽⁶⁾
Dates of vaccinations 1. 2.

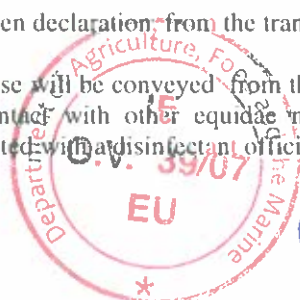

Or (ii) a booster vaccination following a previously certified course of primary vaccination, in accordance with manufacturer's recommendations: ⁽³⁾⁽⁵⁾⁽⁶⁾
Date of booster vaccination: 18/08/2026 (DATE)

Batch No	Vaccine Type	Date	
N/A	N/A	N/A	1 st Primary
N/A	N/A	N/A	2 nd Primary
A332A01	Equiils Prequenza Te	18/08/2026	Last Booster

- l) The said animal shows no clinical signs of Contagious Equine Metritis (CEM) and, as far as can be determined, during the last 60 days, it has not been on any holding where there has been any suspicion of CEM during that time, nor has it had contact indirectly, or directly through coitus, with equidae infected or suspected of being infected with CEM.
- m) I have a written declaration from the transporter, stating that:

- (i) The horse will be conveyed from the premises of origin to the Airport of dispatch without coming into contact with other equidae not similarly certified, in a vehicle previously cleansed and disinfected with a disinfectant officially recognised in the country of dispatch,
